Overview

The Carbon Portfolio Report provides a deeper understanding of a portfolio's position with regards to the transition towards a low-carbon economy. It compares the portfolio with a benchmark across four carbon assessments: Carbon Risk Rating, Carbon Intensity, Fossil Fuel Involvement and Carbon Solutions Involvement. The combination of these assessments provides a multi-dimensional view of the portfolio's performance versus the benchmark and provide useful insights about the portfolio holdings.

- Portfolio
- Benchmark

Carbon Risk Rating

Page 3-7

The Carbon Risk Rating quantifies the company's exposure and management of material carbon issues in its own operations as well as its products and services.

Overall, the portfolio falls into the **Low** carbon risk category, and has **17% lower** carbon risk than the benchmark.

Score	Category
6.6	Low
8.0	Low

Carbon Intensity

Page 8

Carbon intensity is a relative metric used to compare company emissions across industries. Sustainalytics divides the absolute emissions by total revenue, meaning the figure is expressed in tonnes of carbon dioxide equivalent per million USD of total revenue.

Overall, the portfolio is **38% less** carbon intensive than the benchmark.

tCO2e/Mil USD
104.9
167.9

Fossil Fuels

Page 9

Fossil Fuel Involvement measures the percentage of revenue that companies derive from thermal coal extraction, coal-based power generation, oil & gas production, oil & gas-based power generation, and oil & gas-related products and services.

Overall, the portfolio has **72% less** exposure to Fossil Fuels than the benchmark.

Weighted percentage
3.2%
11.2%

Carbon Solutions

Page 10

Carbon Solutions Involvement measures the percentage of revenue that companies derive from green transportation and renewable energy.

Overall, the portfolio has **81% less** exposure to Carbon Solutions than the benchmark.

Weighted percentage
2.4%
12.7%

Carbon Risk Rating

- Portfolio
- Benchmark

The Carbon Risk Rating quantifies the company’s exposure and management of material carbon issues in its own operations as well as its products and services. At each value chain stage, a company’s vulnerability to carbon risks is assessed. This is followed by an assessment of how much of this risk is manageable as opposed to systemic, with a final step of evaluating the degree to which management policies are already in place.

Overall, the portfolio falls into the **Low** carbon risk category, and has 17% lower carbon risk than the benchmark.

The portfolio has 35% less exposure to companies with High and Severe carbon risk than the benchmark.

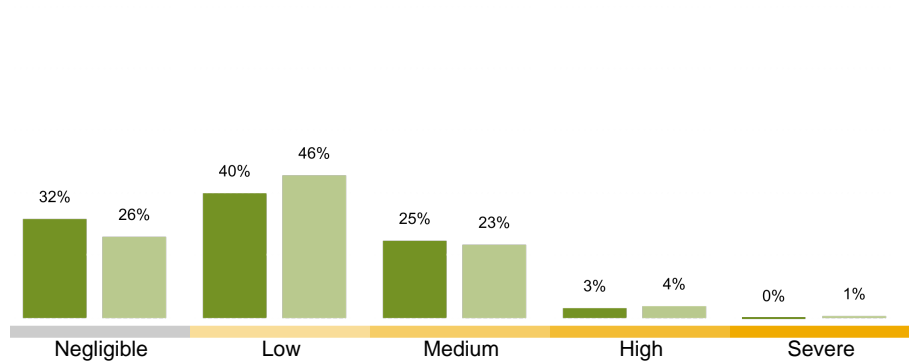

Overall Carbon Risk

Score	Category
■ 6.6	Low
■ 8.0	Low

Carbon Risk Categories

- Negligible: 0**
The portfolio has little to no material carbon risk
- Low: 0 - 10**
The portfolio has carbon risk that could have material impact
- Medium: 10 - 30**
The portfolio has carbon risk that is material
- High: 30 - 50**
The portfolio has carbon risk that is highly material
- Severe: > 50**
The portfolio has severe carbon risk

Carbon Risk category by aggregate portfolio weight

Carbon Exposure

Exposure considers a company’s sensitivity or vulnerability to carbon risks. Very low exposure suggests that an issue is not material to a company; higher exposure suggests that the issue is material.

Overall, the portfolio has 24% less exposure to carbon risk factors than the benchmark, and falls into the Low exposure category.

Overall Exposure

Score	Category
■ 12.0	Low
■ 15.8	Low

Carbon Management

Management considers a company’s commitments and actions to determine how a company approaches and handles carbon issue through policies, programmes, quantitative performance and involvement in controversies. Higher scores indicate stronger management.

Overall, the portfolio has 21% weaker management of carbon risk than the benchmark, and falls into the Average management category.

Overall Management

Score	Category
■ 33.9	Average
■ 42.7	Average

Operations

Operations

Score	Category
4.1	Low
4.6	Low

Overall, the portfolio falls into the Low operations carbon risk category, and has 11% lower operations carbon risk than the benchmark.

Exposure

Score	Category
7.6	Low
10.1	Low

Overall, the portfolio has 25% less exposure to carbon risk factors in operations than the benchmark.

Management

Score	Category
26.6	Average
35.6	Average

Overall, the portfolio has 25% weaker management of carbon risk in operations than the benchmark.

* By aggregated weighted score (normalized)	100%	100%	6.6	8.0	0%	-1.05	-0.90	0.60	-1.35

Effect**:

. **Sector Allocation Effect:** Impact of portfolio's sector weighting decisions with regard to the benchmark's sector weights and total carbon risk. A negative allocation effect for a sector means the portfolio either overweighted a sector that has a low risk relative to the total benchmark risk or underweighted a sector with higher risk than the total benchmark risk.

. **Selection Effect:** Impact of the portfolio's security selection decisions relative to the holdings of the benchmark. A negative selection effect for a sector means that the portfolio, relative to the benchmark, selected companies with lower carbon risks.

. **Total Effect:** Sum of the sector allocation effect, the stock selection effect, and the residual effect that results from the interaction between the sector allocation effect and the stock selection effect. The higher the value (positive or negative) the greater the effect (increasing or decreasing portfolio carbon risk).

Decisions that Increase Active Risk

Identifies the 10 constituents that increase active risk the most.

Company Name	Sector	Carbon Risk Score	Carbon Risk Category	Contribution to Active Risk	Portfolio Weight	Benchmark Weight	Active Weight
EOG Resources Inc	Energy	44.2	High Risk	1.10	3.2%	0.1%	3.0%
Nordson Corp	Industrials	25.3	Medium Risk	0.56	3.2%	0.0%	3.2%
Lamb Weston Holdings, Inc.	Consumer Staples	16.7	Medium Risk	0.38	4.4%	0.0%	4.4%
Daito Trust Construction Co. Ltd.	Real Estate	13.8	Medium Risk	0.19	3.3%	0.0%	3.3%

Marsh & McLennan Cos., Inc.	Financials	0.0	Negligible Risk	-0.18	2.4%	0.2%	2.2%
Amgen Inc	Healthcare	2.6	Low Risk	-0.18	3.5%	0.3%	3.3%
Mastercard, Inc.	Information Technology	0.0	Negligible Risk	-0.17	2.8%	0.6%	2.2%

Carbon Intensity

Portfolio

Benchmark

Carbon intensity is a relative metric used to compare company emissions across industries. Sustainalytics divides the absolute emissions by total revenue, meaning the figure is expressed in tonnes of carbon dioxide equivalent per million USD of total revenue. Although we try to base this on reported emissions, the vast majority of companies still fail to report, so in many cases the emissions are based on proprietary estimation models. These models are carried out at subindustry and peer group level for Scope 1 and 2 separately.

Overall, the portfolio is 37.52% less carbon intensive than the benchmark.

tCO₂e/Mil USD

Differential

Top Carbon Emissions Contributors

Identifies the 5 companies with the highest contribution to the portfolio's carbon emissions' intensity

Company Name	Sector	Carbon Emissions*			Carbon Intensity**		
		Scope 1	Scope 2	Total	Intensity	Weighted Intensity	Category
Linde Plc	Materials	16,247,000	20,100,000	36,347,000	1,334.2	48.0	D
Waste Connections, Inc.	Industrials	5,609,964	51,506	5,661,470	1,039.6	16.4	E

Glossary of Terms

Absolute Carbon Emissions

In this report, absolute carbon emissions cover scope 1 and scope 2 emissions of the various types of greenhouse gases, expressed in tons of carbon dioxide equivalent. Reporting requirements are standardized under the GHG Protocol by the World Resources Institute and World Business Council for Sustainable Development. This lists the greenhouse gases that companies are expected to account for as: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF₆), and nitrogen trifluoride (NF₃).

Emissions are broken down into the following categories:

Scope 1 covers the direct emissions associated with the energy that a company produces for its own use.

Scope 2 covers the indirect emissions associated with the energy that a company purchases from third-party providers.

Scope 3 covers all other emission sources throughout the value chain (e.g., purchased goods, use of sold products, investments, business travel, etc.) but these are not quantified in this report.

Carbon Intensity

A relative metric suitable for comparing companies' performance. Sustainalytics divides absolute emissions by total revenues, which enables comparison of companies in different industries. Carbon intensity is expressed in tonnes of carbon dioxide equivalent per million USD of total revenue.

Carbon Risk

A risk related to a company's challenge to transition towards a low-carbon economy. A popular synonym is transition risk. This may cover a variety of risk sources including policy and legal, technology, market, and reputation. Climate change risk is a broader concept, comprising transition and physical climate-related risk.

Carbon Risk Exposure

One of the two dimensions of the Carbon Risk Rating, this reflects the extent to which a company is exposed to material carbon risks. Exposure can be considered as a sensitivity or vulnerability to carbon risks.

Carbon Risk Management

The second dimension of the Carbon Risk Rating, this measures a company's handling of material carbon issues through policies, programmes, quantitative performance and involvement in controversies.

Carbon Risk Rating Score (Unmanaged Risk Score)

The company's final score in the Carbon Risk Rating; it applies the concept of risk decomposition to derive the level of unmanaged risk for a company.

Unmanaged Risk

Material ESG risk that has not been managed by a company. This includes two types of risk. Firstly, unmanageable risks that stem from the intrinsic nature of the products or services of a company and/or the nature of a company's business. Secondly, risks that could be managed by a company through suitable initiatives, but which are yet unmanaged.

Weighted Scores

Sustainalytics normalizes the security weights of the matched security results within the selected portfolio and benchmark to equal 100% of the total portfolio weight, by evenly redistributing unmatched security weights and by combining the weights of securities matched to the same company. If there are no security weights available, Sustainalytics will assign equal weights to all securities. Weighted Scores are calculated by aggregating normalized security weighted scores.

About This Report

Sustainalytics' Carbon Risk Ratings are designed to help investors identify and understand financially material carbon risks at the security and portfolio level and how they might affect the long-term performance for equity and fixed income investments. The Carbon Risk Ratings combined with qualitative analyses, provide clients with a differentiated risk signal and deeper insights into the materiality of certain carbon issues for a company and what the company is or is not doing to manage them effectively.

Sustainalytics normalizes the security weights of the matched security results within the selected portfolio and benchmark to equal 100% of the total portfolio weight, by evenly redistributing unmatched security weights and by combining the weights of securities matched to the same company. If there are no security weights available, Sustainalytics will assign equal weights to all securities.

About Sustainalytics

Sustainalytics is a leading independent ESG and corporate governance research, ratings and analytics firm that supports investors around the world with the development and implementation of responsible investment strategies. For over 25 years, the firm has been at the forefront of developing high-quality, innovative solutions to meet the evolving needs of global investors. Today, Sustainalytics works with hundreds of the world's leading asset managers and pension funds who incorporate ESG and corporate governance information and assessments into their investment processes. Sustainalytics also works with hundreds of companies and their financial intermediaries to help them consider sustainability in the policies, practices and capital projects. With 16 offices globally, Sustainalytics has more than 600 staff members, including over 200 analysts with varied multidisciplinary expertise across more than 40 industry groups. For more information, visit www.sustainalytics.com.
